Re-defining the Future of Sound

PRECISION ENGINEERED IN BALI, INDONESIA.

Sound is the differentiator. RedPill is the solution.

RedPill Audio is a fundamental rethinking of what audio hardware can be. Built in Bali, our systems don't simply play music; they reproduce sound with an accuracy that allows the listener to hear details that have always existed, but have never been delivered.

In wellness environments, hospitality spaces, private residences, and performance venues, the quality of sound shapes the quality of experience. RedPill exists at that intersection, where acoustic engineering meets elevated human experience.

Our Environments

- Villa & Private Residence
- Hotel & Resort (Turnkey)
- Restaurant & F&B Venue
- Wellness & Spa Centre
- Performance & Cultural Space
- Commercial & Corporate

“I've just heard things in a song I produced 20 years ago that I've genuinely never heard before.”

STEVE LILLYWHITE CBE

Six-Time Grammy Award Winning Producer

THE LISTENING ROOMS

RedPill HQ · Lodontuh, Bali · Open by appointment
Showroom · Kerobokan, Bali · Open by appointment

THE PRIVATE RESIDENCE

Every detail considered. Every frequency delivered. Sound that transforms a living space into a living experience.

THE SOUND OF HOSPITALITY

A great vibe is worth money, every operator knows it. Premium audio keeps guests comfortable, conversations flowing, and the atmosphere locked in from the first drink to the last. RedPill installs the system. Your space does the rest.

F1

PORTAL SYSTEM

The F1 is RedPill's flagship neuro-acoustic wellness system. Paired with proprietary brainwave entrainment programs, the Portal guides the brain from high-stress Beta states into recovery, focus, or deep relaxation; passively, simply by listening.

Already used by professional athletes and elite wellness centres, the F1 can be offered as a standalone experience or integrated into traditional wellness practices.

Beyond wellness applications, the F1 also performs exceptionally well in gaming setups and solo listening sessions, where its accuracy and immersion truly stand out.

SPECIFICATIONS

Type	2.1 Desktop + Active Subwoofer
Amplification	DSP Powered D-Class Amp
Frequency Range	45Hz – 20kHz Dual 4" Cone
Driver (LF) Driver (HF)	Dual 2.5" Full-range

THE INVISIBLE USP

Sound is the only element that can transform a space without changing it.

Lighting shapes the mood. Décor defines the aesthetic. But sound is what truly transforms a space, shifting it from relaxed daytime ambience to vibrant evening energy, without moving a single piece of furniture. Guests who feel the difference return. They spend more. They bring friends. RedPill gives you the hardware to create that, consistently and with control.

HOW WE WORK

TURNKEY INSTALLATION

Site survey, system design, cable routing, installation, calibration, and aftercare. We handle every detail so the experience is seamless from day one.

SYSTEM DESIGN + SUPPLY

For projects with local installation teams, we supply hardware and full system design documentation with calibration guidance.

CONSULTATION

We work with architects, resort developers, and interior designers from concept stage — ensuring sound is designed in, not bolted on.
